

Sample (GSM35166xx), grouped by clinical category

Post-QC cells; median 99% (min 87%) of barcode-filtered cells survive QC

PAS per gene (n)

Set = PAS found in all 17/17 samples (9.0% of 183,510)
Median 3'UTR 1,092 bp single-PAS vs 1,856 bp multi-PAS

Annotation confidence tier

find_close keeps TIER 1+2 only, so 117,565 of 301,860 called peaks (38.9%) were dropped
The cohort set's 0% in the third category is by construction, not a result

Width is the called peak interval; the cleavage site lies inside it
